a) Drug Name- *CARDUUS MARIANUS*

b) Parts used: Extraction of Dried Seeds

c) Procedure- For tution of mother solution take 100 gram of uneven powder of carduus marianus and mix with cleansed water (250ml) and sturdy alcohol (780ml) in old process beneath the class fourth. for making potency 2x take one part of mother tincture mix with four part of purified water and five parts of strong alcohol and making higher strengths mix with dispensing alcohol.

D) Therapeutics action, medical uses, and dosage. — carduus marianus is an old medicine, which had nearly passed out of use and has more recently been revitalized. rademacher valued the seeds in hemorrhages associated with splenic or hepatic illnesses.

It impacts the parts supplied by the coeliac axis, particularly the distribution of the hepatic and splenic arteries, especially the latter, seems well traditional.

Congestive conditions of the splenic circulation are those most furthered by it. to a lesser extent, the whole venous contraption is influenced by this drug, giving power to the veins, and avoiding varicose and other dilatations. But little effect, however, is observed upon the hemorrhoid circulation, as piles do not seem to be directly promoted by it.

Dull, aching, splenic pain passing up under the left scapula, and allied with pronounced general debility and despondency is the suggestion for its use. It controls splenic pain even where no extension can be detected, and it is the remedy for hypertrophy of the spleen when non-malarial in character. Congestion of the liver, spleen and kidneys is calmed by its use. Bilious states, with stitches in the side and pain in the abdomen, hard and caring right hypochondrium, gall stones, jaundice, hepatic pain and puffiness, vomiting of pregnancy.

Painful dysuria, from urethral caruncle, and pelvic cramming have also been quickly relieved by it. a strong tincture (seed, ꝯviii to alcohol oj), or the homoeopathic mother essence, in doses of from 1 to 20 drops.

Specific indications and uses.—splenic, hepatic and renal crowding, face sallow, appetite capricious; nervous irritability; misery; physical debility; pain in either hypochondriac; pelvic tension and weight; congestion of the parts complete by the coeliac axis; and non-malarial splenic hypertrophy
