Proposal : The goal of the session is knowledge sharing of state of art technologies in the computational research. Securing data is mandatory in all computational fields. For years, IT security professionals and researchers have turned to Security in Computing as the definitive guide to information about computer security attacks and counter measures. The forces affecting cyber have only grown in sophistication, scope and frequency. Perhaps it becomes accustomed to such incidents. The brush off these assaults on the digital lives for the sake of what to believe is innovation, productivity and convenience.

Hence the topics may include, but not limited to the following:

- Knowledge Mining
- Mobile Distributed Database Security
- Big Data Analytics
- Internet of Things

- Cloud Security
- Visual Cryptography
- Speech Recognition
- Virtual & Augmented Reality
- IVA & Smart Cities
- Neural Networks
- Computational Simulation.
- Intelligent Systems.
- Business Intelligence.
