Open Submissions Indexed Peer Reviewed

Open Access Policy

This journal provides immediate open access to its content on the principle that making research freely available to the public supports a greater global exchange of knowledge.

In this age of information Open Access publishing model gained popularity rather than traditional subscription based publishing model due to its reach to everyone freely. Reaching to more targeted and non-targeted audience simultaneously provide the authors their due credibility along with popularity among the scholars working on the same field. On the other hand, valuable scientific information reaches to academicians who are not able to bear the subscription charges and view the articles. Therefore, open access model is providing access of the scientific information to all the researchers and academicians in all quarters.

Once a manuscript is accepted it is processed for formatting and layout by our design team and then published online with open access to everyone. Open Access provides free, unrestricted online access to the scholarly literature to anyone in the world. At APH, we are convinced that everyone – not only scientists - can benefit from research results, and we publish all our articles exclusively under open access distribution, with a Creative Commons attribution license agreement. The copyright is transferred to authors and readers have the right to use, distribute, and reproduce in any medium, provided the source is properly cited.

APH strives to ensure that publishing fees are not an obstacle to publication. Article publishing fees help us to offset the costs associated with editing, formatting & layout, type-setting, storing, tier-climbing, archiving and peer evaluation of the article, as well as maintaining the most advanced website in online publishing, and our friendly, professional office. There is no additional charge for colour figures or for supplementary material.

PROPOSED CREATIVE COMMONS COPYRIGHT NOTICES

1. Proposed Policy for Journals That Offer Open Access

Authors who publish with this journal agree to the following terms:

1. Authors retain copyright and grant the journal right of first publication with the work simultaneously licensed under a [Creative Commons Attribution License](#) that allows others to share the work with an acknowledgement of the work's authorship and initial publication in this journal.
2. Authors are able to enter into separate, additional contractual arrangements for the non-exclusive distribution of the journal's published version of the work (e.g., post it to an institutional repository or publish it in a book), with an acknowledgement of its initial publication in this journal.
3. Authors are permitted and encouraged to post their work online (e.g., in institutional repositories or on their website) prior to and during the submission process, as it can lead to productive exchanges, as well as earlier and greater citation of published work (See [The Effect of Open Access](#)).

Proposed Policy for Journals That Offer Delayed Open Access

Authors who publish with this journal agree to the following terms:

1. Authors retain copyright and grant the journal right of first publication, with the work after publication simultaneously licensed under a [Creative Commons Attribution License](#) that allows others to share the work with an acknowledgement of the work's authorship and initial publication in this journal.
2. Authors are able to enter into separate, additional contractual arrangements for the non-exclusive distribution of the journal's published version of the work (e.g., post it to an institutional repository or publish it in a book), with an acknowledgement of its initial publication in this journal.
3. Authors are permitted and encouraged to post their work online (e.g., in institutional repositories or on their website) prior to and during the submission process, as it can lead to productive exchanges, as well as earlier and greater citation of published work (See [The Effect of Open Access](#)).

PRIVACY STATEMENT

The names and email addresses entered in this journal site will be used exclusively for the stated purposes of this journal and will not be made available for any other purpose or to any other party.

APH's Article withdrawal / retraction / removal / replacement policy

APH takes its responsibility to maintain the integrity and completeness of the scholarly record of our content for all end users very seriously. Changes to articles after they have been published online may only be made under the circumstances outlined below. APH places great importance on the authority of articles after they have been published and our policy is based on best practice in the academic publishing community.

Usually, the editor of a journal is the individual responsible for deciding which articles, texts or images will be published and which should be rejected. The decisions will, however, be influenced by the editorial board, the policies of the journal and legal requirements such as copyright infringement or plagiarism.

This policy has been designed to address these concerns and to take into account current best practice in the scholarly and library communities. As standards evolve and change, we will revisit this issue and welcome the input of scholarly and library communities. We believe these issues require international standards and we will be active in lobbying various information bodies to establish international standards and best practices that the publishing and information industries can adopt. See also the [National Library of Medicine's policy](#) on retractions and the recommendations of the [International Committee of Medical Journal Editors \(ICMJE\)](#) concerning corrections and retractions.

There are different circumstances where articles submitted to the editor must be removed or retracted such as:

Article withdrawal:

This is most commonly used in the press when early versions of the written texts and articles are withdrawn due to errors. Sometimes, article withdrawal occurs when articles are submitted twice or to multiple journals, when the texts may represent infringements of the ethical codes, plagiarism and other fraudulent use of data.

Articles in Press (articles that have been accepted for publication but which have not been formally published and will not yet have the complete volume/issue/page information) that include errors, or are discovered to be accidental duplicates of other published article(s), or are determined to violate our journal publishing ethics guidelines in the view of the editors (such as multiple submission, bogus claims of authorship, plagiarism, fraudulent use of data or the like), may be "Withdrawn" from website / database. Withdrawn means that the article content (PDF) is removed and replaced with a PDF simply stating that the article has been withdrawn according to the APH Policy on Article in Press Withdrawal with a link to the current policy document.

Article retractions:

These are used as post-publishing methods of dealing with infringements of editorial ethical codes, plagiarism, fraudulent use of data and other issues related to the publishing sector. In most of the cases, a retraction will be used in order to correct such errors as the ones stated above.

Standards for dealing with retractions have been developed by a number of library and scholarly bodies, and this best practice is adopted for article retraction by APH:

- A retraction note titled “Retraction: [article title]” signed by the authors and/or the editor is published in the paginated part of a subsequent issue of the journal and listed in the contents list.
- In the electronic version, a link is made to the original article.
- The online article is preceded by a screen containing the retraction note. It is to this screen that the link resolves; the reader can then proceed to the article itself.
- The original article is retained unchanged save for a watermark on the .pdf indicating on each page that it is “retracted.”

Article removal:

Sometimes, editors are required to completely remove articles or texts from the online database of the journal. This will occur in exceptional cases when errors cannot be corrected, the article infringes legal rights of other individuals, is defamatory or there is a court order that imposes such a decision. In these circumstances, while the metadata (Title and Authors) will be retained, the text will be replaced with a screen indicating the article has been removed for legal reasons.

Article replacement:

In cases where the article, if acted upon, might pose a serious health risk, the authors of the original article may wish to retract the flawed original and replace it with a corrected version. In these circumstances the procedures for retraction will be followed with the difference that the database retraction notice will publish a link to the corrected re-published article and a history of the document.
